Q:Who needs Breast Reduction?

Ans:1. Young girls suffering from excessive enlargement of breast. (Virginal hypertrophy of breast)
2. In Adult females with abnormally enlarged breast leading to physical disability like pain in shoulder, heavy weight on chest & poor hygiene under the breast & social embarrassment.

Q:How the procedure is done?

Ans:Excessive tissue is taken out surgically, keeping in mind the shape and symmetry of the breast.

Q :Does it have any adverse effort on lactation / Baby feeding?

Ans :Yes, there is a possibility of difficulty in lactating after breast reduction surgery. But now with newer techniques like superomedial pedicle the incidence of lactation related problems has decreased.

Q:Does Liposuction help in breast reduction?

Ans:Yes, it can be helpful in patients with moderate enlargement of Breasts.
